PROFILE

Full-stack software engineer with client-facing freelance experience and hands-on delivery of Galaxiora, a bilingual production platform. Work spans architecture, accessible React/Next.js interfaces, NestJS APIs, PostgreSQL/Prisma data models, deterministic astronomical calculations, integrations, security, CI/CD, analytics and AWS operations. I use AI coding tools with reviews, tests and documented acceptance gates rather than treating generated code as verified.

TECHNICAL SKILLS

Languages & frontend: TypeScript, JavaScript, React 19, Next.js 15 (App Router, SSR, metadata), HTML5, CSS3/CSS Modules, responsive/mobile UX, accessibility

Backend & architecture: Node.js 24, NestJS 10, REST/JSON APIs, monorepo/npm workspaces, typed validation, modular services, rate limiting

Data & access control: PostgreSQL, SQL, Prisma ORM/migrations, Redis (OpsPilot), authentication, session/JWT flows, RBAC, scoped API keys

Auth & integrations: Email/password flows, secure cookies, optional Google/Apple OAuth 2.0 / OIDC implementation (configuration-gated), PKCE, state/nonce, JWKS verification

Scientific & domain engines: Swiss Ephemeris (@swisseph/node, pyswisseph), astronomy/time-zone/DST handling, natal D1/D9/D10, Vimshottari, rule-based Panchanga and time-window search

Data, content & AI: RSS/news ingestion, Azure AI Translator (NMT), multilingual normalization, Wikimedia Commons licensed-image metadata, LLM API integration/fallback, AI-assisted coding

Cloud, SEO & analytics: AWS EC2, Ubuntu/Linux, Caddy/HTTPS, systemd, Docker for development, GA4, Search Console, IndexNow, sitemap.xml, JSON-LD, hreflang

Testing & delivery: Git/GitHub, GitHub Actions CI/CD, Node.js unit/integration tests, Playwright desktop/mobile E2E, TypeScript builds, reference datasets, guarded releases and PostgreSQL backups

MY OPEN WORKS

Galaxiora | Full-Stack Product Engineering · Team Startup | 2026 – Present

English/Ukrainian production platform combining computational astrology, personalized calendars, editorial news, educational tools and community features.

- Engineered a TypeScript monorepo with React 19 / Next.js 15 (App Router) frontend, NestJS 10 REST services, PostgreSQL, Prisma migrations and bilingual responsive UX.
- Integrated Swiss Ephemeris with deterministic sidereal calculations, D1/D9/D10 natal views, Vimshottari periods, time-zone/DST checks and a 20-chart reference corpus covering 600 sign comparisons.
- Developed Panchanga calendar/time guidance: five-limb daily data, planetary periods, Hora/Choghadiya windows, personalized rules, event-lagna checks and activity-specific screening that explicitly flags incomplete certification.
- Built Vedic and Western horoscope/transit pipelines, natal aspect analysis, Ashtakavarga-based evidence and rules-driven synthesis; kept computed facts separate from interpretive text.
- Implemented GalaxiNews: scheduled publisher ingestion, editorial quality gates, language-aware Azure Translator NMT, Hindi/English/Ukrainian normalization and open-license image attribution via Wikimedia Commons.
- Delivered user workflows for accounts, saved natal data, personal dashboards, Tarot, guided Yoga sessions, GalaxiPedia educational content, GalaxiCom discussion and calendar/ICS exports.
- Developed authentication and security flows including registration/email verification, authorization boundaries, rate limiting and optional Google/Apple OIDC with PKCE/state/nonce and verified identity binding.

- Built AI-assisted private reading workflows with deterministic input evidence, provider fallback, output validation and separation from non-LLM public horoscope/news generation.
- Owned deployment/quality workflow on AWS EC2, Ubuntu, Caddy/TLS and systemd: GitHub Actions, Playwright mobile/desktop checks, regression/reference tests, guarded releases and database backups.
- Implemented technical SEO and measurement: bilingual metadata/hreflang, sitemaps/robots, JSON-LD, IndexNow, Google Search Console, GA4 and privacy-aware first-party aggregate analytics.

OpsPilot Admin | Independent Engineering Project · B2B Prototype | 2025 – 2026

A prototype control plane for safe runtime configuration and administrative workflows.

- Designed workspace-scoped RBAC, revisioned configuration changes, approvals, audit logs and rollback paths for administrative workflows.
- Implemented Redis cache-aside, service API keys, rate limits and a Node.js SDK with resilient caching and clear authorization boundaries.
- Measured a local API benchmark of 1,000 requests at concurrency 50 (development benchmark, not live customer traffic).

GitHub: OpsPilot Admin

PROFESSIONAL EXPERIENCE

Independent Web Developer · Freelance | May 2023 – Sep 2026

- Delivered responsive business websites and landing pages for local and referral clients, from requirements and UX structure through implementation and handover.
- Worked directly with clients, incorporating design feedback, revisions and clear project communication.

Creative production & commercial motion design | 2016 – 2023

- Produced client-facing visual work and animations; developed visual storytelling, composition and an eye for frontend detail.

EDUCATION

M.Sc., Software Development · Kryvyi Rih National University · 2018
